

# Maintain an Aspect Ratio

We want to create a frame on our drawing paper that has the same aspect ratio, that is relationship between width and height as the photo reference

(1) Draw top and left side edges on your drawing paper

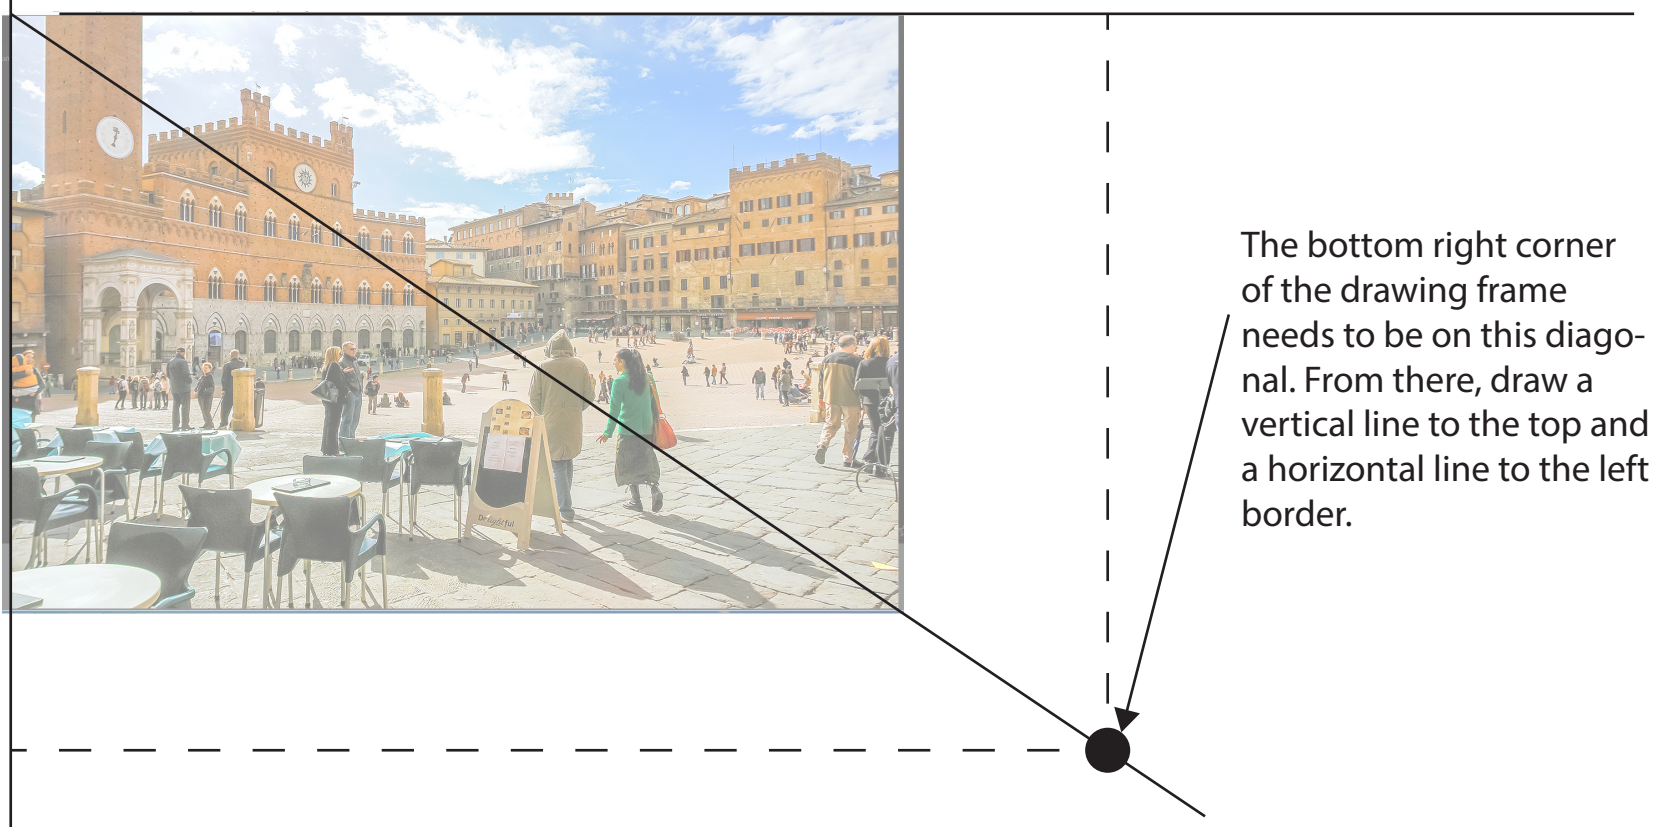

(2) Align the left and top side of photo reference with these drawn lines

(3) From top left draw a diagonal through the photo onto the drawing paper

(4) Choose a new corner point on the diagonal

The bottom right corner of the drawing frame needs to be on this diagonal. From there, draw a vertical line to the top and a horizontal line to the left border.
